

Ice storms, earthquakes, tornadoes, severe heat waves, and massive lightning can leave millions without power. There is increasing concern that the electrical grid could be susceptible to hackers. The Sarbanes-Oxlet Act is passed in 2002, putting heavy requirements on companies in regard to their financial documents and reporting capabilities. With so much to worry about, all companies should have a disaster recovery plan. **An integral part of any well designed disaster recovery plan should include a UPS or generator.**

- A generator is required so that emergency power is available to power all critical equipment. Power is crucial in creating a safe environment. Whether your environment is commercial, industrial, medical, or residential, we have a solution to your generator needs.
- An Uninterruptible Power Supply (UPS) is also a mainstay to many buildings in order to keep the phone system, security system and the computers from crashing during the time it takes for the generator to start and transfer.

One must be prepared. We lead the way with both products and services to help serve you no matter what life brings your way.

The **Powertron Tap Box** is available for a fast connection in case of an emergency, especially if the site is not a candidate for a permanent generator. This generator docking station allows temporary power to be restored and connected within minutes!

What Steiner Power Systems Can Do For You:

- ✓ Assist the engineer in designing a properly sized and fully featured generator or UPS system just for you
- ✓ Provide guidance in adding additional layers of protection to the system such as Transient Voltage Surge Suppression (TVSS) and remote monitoring
- ✓ Work with the building owner or the electrical contractor to ensure proper installation
- ✓ Provide expert maintenance after installation to assure long term reliability (Can include fuel polishing)
- ✓ Arrange for diesel refueling by one of our fueling partners in the event of a long term outage
- ✓ Access to over a million dollars in spare and replacement parts at any time
- ✓ Available **24 hour hotline** to arrange emergency service or get a temporary generator rolling right when you need it. Technicians are always on-call at **1-800-STEINER**

Steiner Power Systems provides a diverse set of skills to approach each customer's site as a unique application. We provide a broad array of "best in class" products *and* the expertise to apply them into a complete and comprehensive solution.
