FOR IMMEDIATE RELEASE

Steiner Power Systems Announces Release of New PowertronSM Tap Box

PowertronSM 400 Amp Tap Box Expected to Provide Emergency Power within Minutes

ELK GROVE VILLAGE, IL – April 12, 2010 – The Steiner Electric Company has just announced immediate availability of their new UL listed PowertronSM 400 Amp Tap Box. This patent pending “quick connect” docking station allows a facility to be generator power ready and to be able to restore power within minutes instead of hours when done on an emergency basis.

“The new PowertronSM Tap Box is an economical solution for many facilities,” said Kevin McGowan, Sales Manager at Steiner Power Systems. “When the cost of a permanent generator is prohibitive or if the site is not a candidate for a permanent generator, the PowertronSM Tap Box is an economical solution for a fast connection. This device allows temporary power to be restored within minutes, making your facility emergency power ready while avoiding the costly and time consuming process of connecting to temporary power.”

The Tap Box is used with a transfer switch to connect to a building’s critical electrical load. The custom designed NEMA 3R Aluminum box enclosure is available in 208, 240 or 480 volt configurations. The design features a GFI outlet to power the generator’s block heater and battery charger, and includes start-stop terminals that can be used with an automatic transfer switch. A polycarbonate weather shield is also standard on all models.

Other configurations of the Tap Box are also available, including an 800 Amp model that can be used with a manual or automatic transfer switch. Amperages greater than 800 can be accomplished using multiple boxes and custom length power cord sets are available as well.

Steiner Power Systems is a division of Steiner Electric Company, a wholesale distributor of electrical products, related supplies and services to northern Illinois and northwest Indiana.
