

# WIRELESS SOLUTIONS KITS

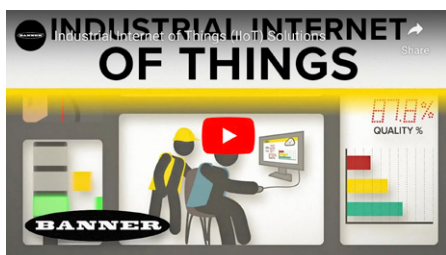

## Fully Integrated, Easy-to-Use Preventative Maintenance Solutions That Solve Specific Applications

Banner Wireless Solutions Kits are fully integrated and easy-to-use solutions for monitoring assets and solving specific applications. They are designed to make it easy for users of any experience level to set up a wireless network, collect remote data, and create visualization tools, warnings, and alarms. The Steiner Automation & Controls team can help

you review and select the right Wireless Solutions Kit for Relative Pressure Input, Tank Level Input, Temperature/Humidity Input, or Wireless Vibration Input compatible with your existing systems and programmable for your required application.

### Wireless Solutions Kit Features

HMI provides graphical displays of collected data, baselines, thresholds, warnings, and alarms

- No programming is required. Plug in the box, bind the nodes through the HMI screen, install the sensors and nodes, and start collecting data
- Includes pre-programmed DXM700 wireless controller, pre-programmed 25.5 cm (10.1 inch) touchscreen HMI, and 5-port industrial Ethernet switch
- Access raw data right on the HMI or via the cloud from any network accessible location
- View up to 7 days of data history on HMI screen and archive over 30 days of logged data in CSV files
- Increase productivity by using warnings and alarms to quickly identify and resolve potential issues
- Realize payback on an investment through reduction in spares inventory and avoiding unplanned downtime
