

TWIST-LOCK® EDGE

HUBBELL®
Wiring Device-Kellems

Hubbell Twist-Lock® Edge Series with Screwless Terminations

To improve installation time by more than 80% on electrical projects, Hubbell Wiring Device-Kellems has designed the new **Twist-Lock® Edge Series Receptacle** featuring screwless terminations. It's the market's fastest-terminating receptacle, letting installers get more done in less time. Instead of using screws at termination points, a strong

levered spring within the device continues to apply pressure as strands relax over time, keeping wires tight. The Steiner electrical application team can help you select the right twist-lock receptacle with screwless terminations based on your requirements for amperage, volts, wattage, number of poles, and wire size.

Improve Installation time by over 80% with the *EDGE* screwless & tool-less terminations

Strong spring continues to apply pressure as strands relax ensuring a consistent reliable connection

Terminations can be unwired by moving the plunger upwards to the open position using a screwdriver

Features and Benefits

Hubbell's innovative Twist-Lock® Edge Series receptacles with screwless terminations are the fastest devices to terminate on the market.

- Available in a variety of Amps and Volts
- Strong spring continues to apply pressure as strands relax
- No exposed metal on receptacles, allowing more devices to be installed closer together
- No torque screwdrivers required for wiring
